

HR Analytics Dashboard using Tableau

Project Title

HR Analytics Dashboard: Employee Attrition & Workforce Insights Using Tableau

Abstract

The dashboard analyzes employee attrition, workforce trends, and HR KPIs using Tableau. It helps HR teams make data-driven decisions through interactive visualizations.

Objectives

Analyze attrition, monitor workforce metrics, evaluate employee satisfaction, and provide business insights.

Dataset

IBM HR Analytics Employee Attrition Dataset (1,470 employees, 35+ columns).

Tools & Technologies

Tableau, Microsoft Excel, Business Intelligence, Data Visualization, Calculated Fields, Interactive Filters.

KPIs

Total Employees, Active Employees, Attrition Count, Attrition Rate, Average Age, Average Monthly Income, Average Job Satisfaction.

Dashboard Features

Interactive KPI cards, Department-wise Attrition, Gender-wise Attrition, Job Role Analysis, Marital Status Analysis, Overtime Distribution, Years at Company Trend, Filters and Tooltips.

Calculated Fields

Attrition Count = IF [Attrition]='Yes' THEN 1 ELSE 0 END
Active Employees = SUM(Employee Count)-SUM(Attrition Count)
Attrition Rate = SUM(Attrition Count)/SUM(Employee Count)

Key Insights

R&D; has the highest attrition. Sales Executive and Laboratory Technician roles have the highest attrition. Single employees show the highest attrition. Male employees account for more attrition than female employees.

Skills

Tableau, Dashboard Design, Data Visualization, HR Analytics, KPI Development, Business Intelligence, Interactive Dashboards, Data Storytelling.

Conclusion

This project demonstrates practical Tableau skills for building professional HR dashboards that transform HR data into actionable business insights.
